

## DRY UTILITIES

Our Dry Utility Division is “design based” with vast knowledge of power distribution, design, and agency specific standards. Our team can provide real time design scenarios to assist utility agencies to better serve our clients.

Our Dry Utility Division has the great benefit of utilizing the other core services at **Murow|CM** to better equip our clients in making decisions of site acquisitions and project feasibility studies. We can add further value, where others might be limited, through:

- The Constructability Analysis and Reviews
- The Bid Administration Process
- Construction Management Oversight Services
- Dry Utility Refunds and/or Reimbursements

These in-house resources add greater value not only to the work product, but that of our client, as synergies are met throughout the course of a land management project.
